## **1 Executive Summary**

This document is a maternity designed document to support safe and effective practice in the Antenatal setting. Based on RCOG and NICE guidelines, it summarises blood test practice, and aims to prevent overuse of blood tests for the purpose of non-clinically indicated reassurance.

### **1.1 Scope of policy**

This protocol applies to all clinicians working within maternity services.

### **1.2 Executive Summary and Essential Implementation Criteria**

Protocol regarding blood test usage in the Antenatal setting  
Auditable standards are stated where appropriate.

## **2. Aims**

To provide support for clinical decision (with respect to blood tests only) making in the following commonly seen scenarios:-

- Pre-eclampsia (PET)
- Gestational hypertension
- Obstetric cholestasis (OC)
- Spontaneous rupture of membranes (SRM, PPRM)
- Reduced fetal movements
- Antepartum haemorrhage (APH)- see separate guideline

## **3. Responsibilities**

The Maternity Management team.

## **4. Training**

Staff are expected to access appropriate training where provided. Training needs will be identified through appraisal and clinical supervision.

## **5. Monitoring and Effectiveness**

Regular audit as appropriate, with feedback to the management committee, or else audit if concerns are identified.

## **6. References**

RCOG green top and NICE guidelines for the relevant scenario.

*This policy has undergone an equality impact assessment screening process using the toolkit designed by the NHS Centre Equality & Human Rights. Details of the screening process for this policy are available from the policy owner.*

## **7. Appendices**

## Appendix 1: Protocol for Blood Investigations for the Common Clinical Scenarios in the Antenatal Settings

(This doesn't include non-blood test investigations)
