

Equality Impact Assessment (EqIA) Screening Template

When to complete an EqIA Screening

An EqIA Screening Template must be completed when reviewing, changing and developing procedures/ proposals/ projects/ policies. This is a first step and is used to consider whether there are any negative impacts that may arise.

Purpose of an EqIA Screening Template

The purpose of this short exercise is to ensure that you have shown appropriate due regard when considering the impact for people with protected characteristics in your decision making. The screening process is designed to help you consider the circumstances and to inform evidence-based decisions.

If the proposal is of a significant nature and it is apparent from the outset that a full EqIA will be required, then it is not necessary to complete this Screening Template, you can proceed to complete the full [EqIA](#).

If no negative impacts are identified following completion of the EqIA screening then it is not necessary to undertake a full EqIA however, the decision and justification must be clearly recorded in this document.

On completion of the Screening Template:

- Ensure that all the white boxes within the screening are completed.
- Ensure that the Procedure/ Project/ Proposal/ Policy owner has signed and dated the Screening Template.
- Send a copy of the completed template along with the related policy or project proposal to Inclusion.hdd@wales.nhs.uk for the Diversity & Inclusion Team to review.
- Each Screening Template will be reviewed by the Diversity & Inclusion Team and feedback will be provided to the Procedure/ Project/ Proposal/ Policy owner. This may include recommendations for further action to inform robust decision-making.

Title of Procedure, Project, Proposal, Policy being screened:	Maternal Collapse Guideline 664
--	---------------------------------

Description of the Procedure/ Project/ Proposal/ Policy being screened (including key aims and objectives)

The aim of this document is to:
 Identify and correctly manage maternal collapse.
 Objections:
 Summarise and standardise practice with regard to maternal collapse and initiate basic life support in a timely and correct manner.

Evidence considered (including staff and population data, relevant research, expert and community knowledge etc.)

Maternal collapse is defined as an acute event in the woman involving the cardiorespiratory systems and/or brain, resulting in a reduced or absent conscious level and potentially Cardiac Arrest/ death at any stage in pregnancy and up to six weeks after birth.

Maternal collapse is a rare but life-threatening event with a wide range of underlying causes. The outcome, primarily for the mother but also the fetus, depends on prompt and effective resuscitation.
 If the collapse happens in pregnancy the fetus will be affected by the maternal compromise,
 Maternal resuscitation is the primary aim.

Assess which protected characteristics will potentially be affected by the proposal in the table below (please ✓ the relevant box to confirm positive, negative or no impact).

If at any point a negative impact has been identified (actual or potential), you do not need to proceed with the completion of this form, as a full EqlA must be undertaken: [Equality Impact Assessments \(EqlAs\) \(sharepoint.com\)](https://sharepoint.com)
