

HOME INDUCTION OF LABOUR PATHWAY

WOMEN WITHIN PRIORITY 3 RISK ASSESSMENT SHOULD BE CONSIDERED FOR HOME INDUCTION

Assessment within an hour of arrival

- Review care plan and ensure medications prescribed (if required)
- Abdominal palpation (USS if unsure of presentation)
- Maternal observations
- Care bundle risk assessments
- CTG for 30 minutes
- FBC & G&S
- Vaginal examination to assess (BS)

MODIFIED BISOP SCORE

SCORE	0	1	2
Cervical dilatation	<1	1-2	3-4
Length of cervix	>2	1-2	<1
Station	-3	-2	-1
Consistency	Firm	Medium	Soft
Position	Posterior	Central	Anterior

BS $\geq$ 7 $\longrightarrow$ Liaise with LW for ARM when bed is available

BS < 7

PROPESS

10mg into posterior fornix of vagina
Discharge home with advice to return to ward if SROM, concerns with fetal movements, begins contracting regularly or any concerns
Ring woman to check fetal and maternal wellbeing

Arrange appointment to return following day for review.

On return, remove Propess, AN check, CTG and VE

If BS < 7

Obstetric review for ongoing plan if not suitable for ARM

If BS $\geq$ 7

Request LW bed for ARM in line with prioritisation Risk assessment preferably within 24 hours

CERVICAL RIPENING BALLOON CATHETER

Insert CRB

Discharge home with advice to return to ward if SROM, concerns with fetal movements, begins contracting regularly or any concerns
Ring woman to check fetal and maternal wellbeing

Arrange appointment to return following day for review.

On return, deflate CRB and remove, AN check, CTG and VE

If BS < 7

Obstetric review for ongoing plan if not suitable for ARM

If BS $\geq$ 7

Request LW bed for ARM in line with prioritisation Risk assessment preferably within 12hrs

If no fetal concerns, low risk pregnancy and labour establishes with Propess or CRB, consider if woman meets criteria for BBU transfer - CTG required prior to transfer
